Summary

Detail-oriented web developer, specializing in front-end and back-end web development with proficiency in HTML, CSS, JavaScript, TypeScript, React, Node.js and Express, successfully built three responsive apps from scratch including my portfolio website which includes developing, testing, debugging, and launching. As a professional, I bring a diverse skillset to the table, encompassing teamwork, brainstorming, customer service, all driven by a commitment to practical problem-solving.

Web Development Projects

MyFlix Movie App

Personal project, CareerFoundry, October- January 2024

- This API provide users with access to information about different movies.
- Users can sign up, update their personal information, and favorite movies list.
- Is non-relational database, user data was stored in MongoDB.
- Created two single-page, responsive front-end apps, one using React and the other using Angular.
- Built with Node.js and Express, using Mongoose to interact with the database.
- Tested the API endpoints with Postman, deployed the API with Render.

Chat App

Personal project, CareerFoundry, February 2024

- A chat app for mobile devices using React Native.
- The app will provide users with a chat interface and options to share images and their location.
- The app was created be optimized for both Android and iOS devices.
- Developed using Expo and the chat messages were stored with Google Firestore.

- The app page where users can enter their name and choose a background color for the chat screen before joining the chat.
- A page displaying the conversation, as well as an input field and submit button.
- The chat provides users with two additional communication features: sending images and location data.
- Data gets stored online and offline.
